

Security Features

The Best Check Stock You Can Buy...At a Price You Can Afford!

Security features are continuously being updated and developed to defend against alteration, erasure, toner removal, photocopying, and counterfeiting. Choosing the right security features for your business can save you big money. Without preventive measures, your company becomes an attractive target for crime rings or individual fraud artists. A shift in liability from the banks to the check issuers has begun because the issuers are not protecting themselves. A good secure check will have both covert and overt features.

Check 21 Image Ready

When a financial institution stores checks electronically or as microfilm it is necessary for the data to take up a small amount of storage space and be readable. Through the use of passive inks with a neutral finish, our checks assure the smallest image size possible and reduce background clutter to make the check readable yet secure.

Original Document

Original Document is screened and does not reproduce when copied.

Pad Lock Icon

Describes some of the visible and hidden security features.

Endorsement Area / Federal Reserve Bank Regulation CC

Below the endorsement there is more microprinting.

Visible Fibers

Red & Blue fibers allow for visual authentication

Invisible Fluorescent Fibers

Fibers are revealed under black light.

Overt Warning Band

Documents obvious security features for easy verification.

Copy-Void in Pantograph

A repeated background design that the word "VOID" is exposed when scanned or copied.

Border Microprinting

Words are printed so small that they appear as a line to the naked eye. Only when magnified do the microprinted words become visible, making it extremely difficult to duplicate with a copier or scanner.

True Watermark

Can be seen when the check is held up to a light source, but will not scan or copy. This feature is added to the paper during the manufacturing process.

Erasure Protection

When erased, color pantograph becomes white.

Thermochromic Ink

Ink that disappears when warmed by touch or breath
